★★★★★ Fast, easy-to-use and rock solid., September 24, 2009 By Dean R.

This review is from: [Netgear Rangemax WNDR3700 Dual Band Wireless-N Gigabit Router \(Black\)](#) (Electronics)

"This router is fast, easy to set-up and smartly engineered. Although this is a high-end feature-rich consumer router, out of the box, I had this running in just a few minutes. Using the simple color-coded 1-2-3 step setup process, an expert, or a novice, can have this router up and running very quickly... The left panel is the list of the feature sets, such as "wireless settings," or "guest network" settings; the middle panel has the pick list of options for the feature set; and the right panel on the screen explains, in the easiest of terms, what the features and options mean. There is little need to refer to the product manual or other help. Everything is in one place, and in the right place... I streamed a Netflix movie to an HD television flawlessly through a Toshiba laptop and an HDMI cable. There was no stutter in the picture, and the picture quality was excellent. Unlike past video streaming, I did not experience a dropped picture while waiting for the video buffer to reload...This router is my third, and best to date."

★★★★★ One of the best routers you can get, Loaded with features., March 2, 2010 By S. Hadley.

This review is from: [Netgear Rangemax WNDR3700 Dual Band Wireless-N Gigabit Router \(Black\)](#) (Electronics)

"I did a LOT of research before buying this router, if your looking for a top performing router with all the best features this is it. I've been using it for about 3 months, the speed lives up to it's promises I usually have a solid transfer rate. The range is very good,.. I always have a good 300 MegaBits/sec wireless transfer rate, and get about 1.5 - 1.8 MegaBytes/sec rate when transferring to/from my USB hard drive I have plugged into the router. I NEVER get dropped connections (like I did every 20 minutes with old my crappy d-link router)... Some awesome features I like are the ability to add a USB hard drive, and the built in server so you can access your USB hard drive (read and write) from any computers web browser or an Iphone/Blackberry anytime without having to leave your computer on at home. It has a built in Media Streamer so you can stream videos/music/pictures off a hard drive to any computer on your network (I have mine streaming through my xbox 360). There are so many features there is almost no limit. The gigabit ports have super fast transfer rates through the wired connection... I spent a bit more money then I wanted to for a router, but I wanted all the best features and I was sick of dealing with cheap routers that didn't work right all the time, so it was totally worth it to get this router..."
